

Sample SOP for Data Science

I was always curious about learning how industries and businesses work. In that learning phase, I have come to know that data plays a major role in every industry. From large scale to small scale firms, they use data to find out their consumer preference, competitor's performance, and to forecast their sales. The scope and the practical exposure made me choose it as a career option.

My career path was chosen based on the key subjects that I was always curious to learn. Since my childhood, I have been very much interested in mathematics subjects. I was good in statistics, probability, calculus and algebra. Also, I was keen to learn about different areas of computer science and further developed an interest in learning about search engines. The interest made me do a bachelors' program with a computer science background.

I have completed my BSc Mathematics and Computer Science in the INSTITUTE NAME with 85%. The academic life taught not only the technical knowledge but also the non-technical skills such as communication, presentation, and management skills. I was a top-performer in my academic program. I have also done certifications in programming, data structures from COURSE OFFERING NAME.

I also did an internship in the ORGANISATION NAME as a JOB ROLE and I have worked in the areas such as _____. There I have utilised my theoretical knowledge practically and gained more technical and organisational skills. This work experience made me dive deeper into how data plays a vital role in companies and the desire of pursuing data science.

I had a discussion with my mentor about the plan of studying data science and he has suggested that I do the course in the UNIVERSITY NAME at COUNTRY NAME. As I have gone through the curriculum, infrastructure, education standard, training, and other areas, I decided that the UNIVERSITY NAME will be the perfect place to step up my career.

I believe that the knowledge I will gain from the UNIVERSITY NAME in data science will be a great step that I will ever make in my career. With the right technical knowledge learned from the data science course, I will work on my professional growth. From the knowledge

and the skillset, I'm sure that I will come up with new innovative ideas and support the business with unique projects. I hope that my application gets considered to make me pursue my dream course.
