

Life was better when technology was simpler. To what extent do you agree?

You should use your own ideas, knowledge, and experience, and support your arguments with examples and with relevant evidence.

*You should write at least **250** words.*

Life was better when technology was simpler - Band 8 IELTS model essay

It is impossible to deny that, in the past several decades, there has been a remarkable increase in technological advancement, which has had a significant influence on our lives today. On the other hand, there are many who maintain that life was better and easier before the advent of technology. The reasons why living with current technology is better shall be discussed in this article.

People generally liked life in the past since it was more straightforward and far less confusing. The ability to comprehend modern technology and adapt one's lifestyle to it calls for patience, which the majority of people view as an annoyance. The behavior, in and of itself, was uncomplicated and contributed to the overall simplification of the situation.

Everything we do now is a direct result of technological progress that has allowed us to work more efficiently and in less time. The ability to accomplish any work at the snap of one's fingers is now within the reach of humans. Dishwashers and other innovations like them have made it feasible to spend more time engaging in other activities or simply unwinding. The fact that it may be utilized for either good or evil is one of the reasons why technology has become so prevalent in today's society.

It's safe to say that many people would prefer to live in a world without modern technology because they think it would make their lives simpler. Personally, I disagree since I think many are ignorant or just haven't been taught the proper usage of this term, thus I can't agree with this.

Life was better when technology was simpler - Band 7.5 IELTS model essay

Today, advanced contemporary technology is everywhere. People with diverse ideas about machines spontaneously engage in a great number of disputes. Many argue that the present degree of technology has made life more difficult than in the past. I personally think that modern technology makes several lives more convenient.

To begin with, history demonstrates the significance of science and technology to human existence on Earth. Our economy, industries, and even agriculture are supported by scientific discoveries. For instance, our civilization today would look substantially different from what it does now if thermal energy and many other uses of electricity had not been found. Additionally, medical care has been going swimmingly thanks to the assistance of technology, and it will continue to become better as new technology is developed over the course of time.

In addition, humankind has been successful in its attempts to colonize space and has made significant progress in the areas of communication and transportation. When big plants are considered, the contributions of science and technology to the prevention of damage to the environment may be seen. Utilizing renewable energy sources is a necessary component of environmental protection, and taking even a modest amount of preventative action may yield significant results. There is an abundance of new technology being developed that is focused on the components of solar panels. It is now possible for us to travel on roadways made of solar panels and to install windows made of solar panels in our houses and places of business.

All of this demonstrates that technology plays a beneficial function in the modern world that we live in. Also, the fact that individuals are able to save time, money, and energy as a result of advances in technology demonstrates the significant contribution that technology makes to society.

Life was better when technology was simpler - Band 7 IELTS model essay

It is undeniable that technology in the present day is expanding exponentially. It made everyone's lives much simpler and lowered the effort required for physical labor. Some individuals argue that our lives were too joyful before the advent of automation. I concur with this viewpoint and shall elaborate in the upcoming paragraphs

To begin, our lives are so deeply entangled with technological advancements. This indicates that we intend to purchase new hardware whenever a new version of the software is made available. People have a tendency to sell their current electronic assets, such as phones or machines, in order to get the most up-to-date models, despite the fact that the current equipment is in better shape. This is because there is a perception that it is unsafe to carry an older model in public. As a result of this perception, people tend to sell their current electronic assets. Consequently, it rises to capital expenditures and incurs debts.

Before technology, people were more friendly. They may have formerly lived simply. If they want to hang out, they could go to a friend's place for a face-to-face catch-up. Technology is a key cause of the moral decline. Children spend more time with video games and television than with their classmates. They spend more time in front of screens, reducing their social time. Long-term health problems include obesity and decreased eyesight.

To put it succinctly, I'll write down what I think should be said: despite the fact that technology has made our lives easier, it has more negatives than positives. However, if we use technology in the appropriate route, it will never be able to supplant the straightforward way of life that we want to live.

Life was better when technology was simpler - Band 6.5 IELTS model essay

It is debatable if life was better before the development of modern technology. I agree that certain aspects of life looked to be better off without technological breakthroughs, but I also believe that technology has greatly enhanced our way of life.

True, many members of the elder age believe that their social life was superior back in the day when technology was less complex. They argue that people's increasing reliance on technology has inevitably led to less face-to-face involvement, which has the potential to harm relationships. People used letters as their primary means of keeping in contact with others who lived far away since they lacked access to modern means of communication. It might take days or weeks for a letter to reach in the mail, but people can call or contact one other instantly via social media. When used moderately, today's means of communication may help people feel "closer" to one another and even deepen bonds between them.

To buttress my thesis, I note how technology has benefited many other aspects of life. Modern irrigation and pesticides have greatly enhanced crop production. Large portions of the worldwide population are no longer fighting for food since most locations have plenty. Medical discoveries enable more effective illness treatment, extending life expectancy and improving quality of life. The Internet has made teleworking and online learning feasible, allowing many to attain academic or professional goals. This boosts their happiness.

In conclusion, despite the fact that it has the potential to create certain issues if overdone, technology has undoubtedly made modern living substantially better than it was in the past.
