

Sample SOP for Undergraduate in Medical School

Saving people's lives is one of the greatest things a person can do. Growing up in an Indian family that comes from a medical background I always aspired to become a doctor. Doctors all over the world were given status next to God. This is because they are live savers who relentlessly work for mankind.

During my schooling I used to have a lot of interest in science and even participated in science fairs where I used to explain about the functioning of human parts , tips to take care of our health etc. This interest has grown gradually and in order to explore more related to science I even opted Biology as the main subject in 12th standard. After completing my course to decide my career further I worked as an intern to know more about the environment, domains to explore, latest technologies in the medical field etc.

This internship has taught me many things and in fact helped me to identify my strengths, capabilities to overcome the situations and also created a path for the future. In fact this medical internship practice helped me to deep dive a lot about the medical practices which we are following in these modern days which made me think of choosing a particular field to improve my progress.

Although much progress has been made in this area in the past years, I still feel there is a tendency in medicine to treat the diseases the same way no matter who the patient is.

In the covid-19 pandemic all the doctors including my parents worked 24x7 selflessly to save the people. This inspired me a lot and gave me the courage to do something for society. My parents are my biggest inspiration behind taking up this career.

My personal goal is to become a cardiologist and I completely believe that this University will guide me to acquire skills to become a perfect cardiologist. After a lot of research , I have decided that this is the best university to pursue medicine under the guidance of esteemed scholars/surgeons.

The University holds a great reputation as well as the best alumni doctors. The study curriculum of this university and medical intern practice which they are offering to the students is a great thought which helps the students to gain practical knowledge more and also will have the opportunity to rotate through different wards to understand the interplay between them and the different medical techniques they are following .

My future plan is to continue my education up to Master's and upon successful completion, I would like to return back to my hometown and start a medical practice as a cardiologist and bring new medical research methodologies to my home land to cure diseases.

My experience in medical school will give me a strong foundation upon which to build my future and career. I request you to consider my application and help me in being a part of this prestigious medical school to learn more in order to reach the heights of success.
