

Some people think that all university students should study whatever they like. Others believe that they should only be allowed to study subjects that will be useful in future, such as those related to science and technology.

Give reasons for your answer and include any relevant examples from your knowledge or experience.

You should write at least 250 words.

some people think that all university - Band 8 IELTS model essay

Modern technology requires graduation. Some argue that institute students should study their favourite disciplines or ones that will assist them in the future, including science and technology. However, both viewpoints along with my preference will be explained further.

On the one hand, some individuals believe that colleges should enable students to study whatever interests them, since this would allow for more investigation of many topic areas. Moreover, if they study what they like, they will pursue a job in their field of passion. Babaria University, for instance, allowed students to choose their own courses; consequently, many began pursuing their passions as vocations. Therefore, institutions should let students choose their own courses since it will be advantageous to their careers.

On the other hand, however, institutions should teach technical subjects that are advantageous for the students' futures. For a brighter future, it is necessary to educate oneself on the latest technologies, given that their prevalence is growing daily. For example, according to a survey, a multinational corporation recruited those students with a technical background; as a consequence, the students had greater employment. Therefore, to ensure the future, technological disciplines must be excellent.

My opinion is that allowing students to choose their own subjects to study not only enables them to pursue their passions, but also encourages them to explore the entire field in order to learn more about their areas of interest, which is advantageous because it will provide them numerous experiences. Therefore, students should select their own area for a better job and a more fulfilling life.

In conclusion, despite the fact that technical courses are beneficial, students should choose topics depending on their career aspirations for happiness and stay motivated to work.

some people think that all university - Band 7.5 IELTS model essay

Graduation is the most important requirement to compete in the modern technological environment. Some people continue to debate whether all institute students should study their favourite courses or simply those topics that would benefit them in the future, such as science and technology-related subjects. Nonetheless, both opinions and my own will be examined further.

Firstly, according to some people, colleges should permit their students to choose their favourite subjects. Since students are pursuing their passion, pupils are granted independence and live without tension. For instance, a survey illustrates that students who pursued their passions had less stress than other classmates. Hence, universities' permission gives students health benefits as well.

Secondly, others believe that universities should only let students study technical topics since they are advantageous for the future. Despite the fact that it should rely on the individual's preference, technical disciplines offer greater advantages since they are in high demand due to technological advancements. According to their history, for instance, a reputable corporation chose students with a desire to get more knowledge of technology. Therefore, technological disciplines are vital for the advancement of the future.

In my viewpoint, learners should follow their passion as it is very important for their mental health. In addition, if they will learn subjects according to their interest, then they will never get tired of their work and always work happily. Therefore, students should always select subjects wisely for their future.

To conclude, although both have different aspects, learning an interesting course is always advantageous for learners' future and happy life.

In recent times, education has become more essential to compete in this modern world. Some individuals believe that students should be allowed to choose their own subjects; while, others opine that colleges should solely teach technical subjects. My opinion along with both perspectives will be explained further.

On the one hand, students should choose their courses since it increases their motivation and autonomy. In addition, it motivates students to study more and explore new topics. If students research an area of interest, then they may be more certain of their decision and create a cheerful and motivated atmosphere. Hence, a learner's decision creates an atmosphere conducive to their desire to learn.

On the other hand, individuals believe that children would benefit more from learning science and technology related topics. Moreover, technology is advancing day by day, resulting in a high need for technological sectors. An article proved, for instance, that people in technical

occupations earn more than those in other sectors and advance their careers. Thus, for a better lifestyle and to be competitive, technical topic knowledge is important.

In my opinion, Universities should educate students in technological courses since it is not only important for their careers, but also enriches their lives. Aside from this, when students choose their own subjects, they may make incorrect selections. Therefore, technological knowledge is vital for competition and a higher quality of life.

To conclude, despite the fact that interest may simplify their lives, technical knowledge is necessary to understand the technological world and earn more money.

some people think that all university - Band 6.5 IELTS model essay

Nowadays, education is the most essential need. Some individuals continue to argue that colleges should either allow students to pick their courses or educate science and technology-related subjects for the students' betterment. However, my perspective on this strategy and the two opposing viewpoints will be examined further.

Firstly, according to some people, institutions should enable students to study their favourite courses, as it offers them a purpose for their studies and a motivation to remain motivated. For example, a survey illustrated that, the majority of students who followed their passion, started their start-ups and growing; consequently, their business is getting extended and they are not even getting bored of their work. Hence, passion helps people to grow incredibly.

Others argue that students should be required to study technical courses since they have the ability to solve and react to technological mistakes. Since the institutions assisted youngsters in recognising their abilities, students began to develop differently. Thus, science and technology contribute to improved employment prospects and technological proficiency.

In my opinion, students should be allowed to choose their career as many children have interest in arts or music. Even while these arts are not sufficient to live a life of luxury, they provide calm and contentment, which are essential for a stress-free existence. For instance, a student from the Institute of Information Technology (IIT) became a singer during studies. Therefore, it should be obligatory for students to pursue their passions and have successful careers.

To conclude, even if there is a risk associated with following one's passion, it will be worthwhile if they achieve success through hard effort and can establish a happy life.
