

Sample SOP for Engineering Management

As Steve Jobs said, "It's not faith in technology. It's faith in people". I wanted to bridge the gap between technology and people. This thought made me choose Engineering Management as my bachelor's degree. By opting Engineering Management course, I can learn valuable skills and knowledge related to management as well as proficiency in highly technical engineering concepts.

I completed my schooling in (The school's name) and secured (80%) marks in board examinations. I chose computer science, physics, chemistry, and mathematics as my major subject during high school. This made me proficient in computer software and programming languages. After my schooling, I have done an internship at (The company name) where I gained exposure to working in a tech environment and experienced hands-on experience with the work culture. I also completed an online certification in Information technology offered by (The company name.)

I had been a team leader during my school days and organized many programs conducted in our school. The appreciation from the teachers and members of the school made me realize I'm good at leadership, communication, and decision-making skills. Since I have an interest in tech and management, I thought why not do a course in engineering management?

(The university XYZ) has a tailor-made syllabus and projects for every subject and have experienced professionals to guide the students. The major quality of the institute where it will not compromise on the personal as well as professional growth of the individual made them unique.

Four years from today, I wish to view myself as a successful engineering management graduate where my long-term goal would be to do a master's in engineering management. This degree will help me move forward toward my chosen career path. I hope your esteemed institution recognizes my inherent skills and potential.
