

## **SOP sample for Australia**

The rapid growth of the medical and health sector drew interest towards it to become a part of this development. I was always curious about learning various features that benefit mankind.

I did my schooling in CBSE affiliated school in Andhra Pradesh. During my high school I was an active member in the science club and even organised many activities. Holding this interest further after pursuing my intermediate I appeared for JEE entrance exam and secured an all India rank top rank.

Driven to enter the world of medical sector, I pursued my bachelor's degree in biomedical engineering at XYZ university with a good academic performance. This study helped me to obtain knowledge on how to apply engineering and design principles to solve the medical problems that welfare the people to fight with various health issues. Apart from this I was very active in sports and won medals in inter-college tournaments in badminton. This extracurricular activities improved my physical fitness to stay active physically and mentally.

After my bachelors I got an opportunity to enter into the corporate world that aided me to gain practical knowledge in the field of biomedical sector. I was selected as a junior researcher at XYX laboratories in the year 2019 through campus placements. It allowed me to interact and work under the guidance of senior scientists to gain knowledge about many clinical trials conducted in the scientific laboratory to improve human health from pandemic diseases like covid etc.

Working 3 long years helped me to gain knowledge about basic principles but I would like to explore more into this by upgrading my skills further that adds advantage to my profession. I believe pursuing a master's degree will help me to gain a deeper understanding in the field of biomechanics that involves simulating medical problems.

While exploring for various opportunities regarding higher studies I decided that Australia is a best place to continue my research further because of its international standards for excellence in education. Studies taken in Australia will be an absolute asset to my portfolio and also gives the confidence to compete for jobs locally and internationally.

The ABC university is my first choice to pursue my masters due to its premium training facilities, outstanding lecturers with their immense knowledge, well structured course curriculum which will provide insights about latest emerging trends and technology. Pursuing higher education from this university will guide me in establishing myself in the field of biomedical technology marking me as one among the best scientists.
