

The responsibility to prevent global environmental damage is on politicians rather than individuals. To what extent do you agree or disagree?

Give reasons for your answer and include any relevant examples from your knowledge or experience.

You should write at least 250 words.

The responsibility to prevent global environmental damage-Band 8 IELTS model essay

The rate at which the Earth is being harmed by human activities is concerning. As people become more aware of the troubling situation, more steps are being taken to address it. Although international governments play an important role in environmental health, it is widely accepted that their efforts do not nullify those of people. To demonstrate this point, I will draw on personal experience as well as non-governmental activities performed in my nation.

On the one hand, several non-governmental organizations have been making headway in the fight for a cleaner world. Many Canadian institutions, for example, have student organizations that strive to promote awareness of the lifestyle changes that people can make to protect the environment. These autonomous organizations assist in putting a face to a message and actually urge individuals to change for the sake of the natural environment. As this demonstrates, environmental programs do not have to be administered by the government to be effective.

Citizens' contributions to global cleanup efforts should not be overlooked. Every person may assist in delaying and stopping the damage by reducing energy use and fossil fuel use. People should switch to energy-efficient lighting; improve the efficiency of home appliances; bring their own shopping bags instead of using plastic, and use recycled or recyclable products to reduce waste, which can contaminate water resources. They should also use public transportation instead of their private vehicles to reduce greenhouse gas emissions or fossil fuel consumption. These small actions assist the environment.

To summarize, governments should undertake worldwide environmental preservation, but this issue cannot be effectively handled without the efforts of citizens, who play a vital role in minimizing environmental pollution.

The responsibility to prevent global environmental damage-Band 7.5 IELTS model essay

I believe that the government should be in charge of mitigating environmental harm. Every year, we turn vast amounts of resources into buildings, automobiles, plastics, and other products. In addition, a large number of species have become extinct.

Because we are consumers and spenders, I believe that global environmental problems must be addressed at the individual level. For a brighter future, we must modify our habits. For example, individuals practice bringing their own shopping bags when they go shopping, picking up second hand items, not leaving food unattended, and so on. In the case of primary industries, try not to harvest more animals, crops, and fish than necessary. Furthermore, before buying, consider whether the product is renewable.

However, the global ecosystem faces immense and complicated challenges, such as global warming, food waste, and rising CO2 emissions. These issues are now worsening year after year. As a result, they require government assistance in constructing recycling stations and promoting solar and wind power, to name a few. Solar and wind power, in particular, provide a lot of energy and are clearly efficient resources. The government should also help individual businesses that are attempting to fix these issues.

I would like to close this argument by stating that the global environmental crisis is not limited to a single country; it affects everyone on the planet. The government should fund these projects and issue a warning to the public. At the same time, we should adjust our habits to be more basic and prevent wasting resources.

The responsibility to prevent global environmental damage-Band 7 IELTS model essay

Many people feel that governments alone should be responsible for protecting the global environment, whereas others believe that everyone has a duty to play in preserving the global ecosystem. In my opinion, governments and individuals have a responsibility to conserve the global environment, which will be discussed in further detail in the following article.

Firstly, reducing environmental pollution is a hard endeavor with several stages that require national and international initiatives. However, governments might reduce greenhouse gas emissions from industry and transportation, the planet's main pollutants. A good public transit system may minimize both private automobiles and their carbon dioxin emissions, which can be controlled by long-term government

policies. Encourage enterprises to adopt solar and wind energy instead of fossil fuels. Governments should limit forest logging and residential trash, which harm the ecology and marine ecosystem.

In contrast to this, individual activities are vital for global environmental protection, though. Besides, individuals should utilize recycled or recyclable items to reduce trash, which can pollute water supplies. Water conservation and avoiding excessive usage can decrease water resource depletion. Furthermore, people may have to use public transportation instead of their vehicles to cut greenhouse gas emissions and fossil fuel use. People are urged to join in with environmental preservation initiatives to disseminate this message and educate others about environmental conservation.

Overall, I would like to conclude by saying that governments should be accountable for the protection of the environment; yet, I also believe that people play an essential role in the reduction of pollution.

The responsibility to prevent global environmental damage-Band 6.5 IELTS model essay

The public is responsible for protecting the climate and mitigating global warming. I disagree since it's up to individuals who must obey regulations.

First, why are politicians' roles more popular? They can plan well in light of the fact that they have environmental knowledge. No one seems to obey our authorities' policies. India has banned molded bags and encouraged residents to use alternatives. Hardly 10% of natives observe this rule; the remaining 10% use mold. Our national authority provides regulations, which students must observe. Volunteering preserves natural resources and tackles environmental problems. Volunteering must be demonstrated. Don't waste water, air, or soil. Decrease fuel consumption to reduce pollution. Lockdowns during coronavirus epidemics reduced automobile usage and regenerated the ozone layer. Relying solely on the government to protect the climate is foolish. Future generations should prioritize this issue.

The public is frequently believed to be responsible for protecting the climate and averting global warming. I disagree since I think this is a jurisdiction problem. First, politicians can plan well because of their environmental knowledge. ineffective military policies. India banned plastic bags and advised alternatives. Few locals follow this regulation, using plastic instead. Students must follow only national government instructions. Voluntarism isn't isolated. Allure helps protect the environment and natural resources. Volunteering involves problem-solving. Save paper, water, air, and soil.

Reduce fuel-powered vehicle pollution. The ozone layer recovered when the government imposed a lockdown during the corona outbreak.

In conclusion, a lack of personal responsibility will result in failing to safeguard the environment, which is vital to both individuals and the government. This must be a priority for future generations.
