

When a country develops its technology, the traditional skills and ways of life die out. It is pointless to try and keep them alive. To what extent do you agree or disagree with this opinion?

Give reasons for your answer and include any relevant examples from your knowledge or experience.

You should write at least 250 words.

When a country develops its technology - Band 8 IELTS model essay

In recent times, technology has played a pivotal role in the transformation of present processes. Some individuals believe that as a nation's technology progresses, its traditional skills and ways of life fade. Therefore, there is no justification for their continued existence. I strongly disagree with this assertion, and my preference will be explained further.

To embark with, In our technological environment, ancient skills and practices nevertheless maintain a special place. Moreover, despite the fact that technology has replaced many things, traditional abilities cannot be replaced. Using Patan city as an example, a study revealed that the city is renowned for its traditional textiles, which, despite attempts at mechanical production, cannot replace the skill of human hands. Therefore, not everything can be replaced by technology.

Furthermore, old methods and rituals constantly retain their origins. In addition, it presents significance to the next generation for the benefit of their lives. If the present generation obtains an understanding of historic practices, they will be able to adopt them to improve living and also learn to respect our traditions. Therefore, to preserve our traditions, it is vital to share these abilities with the world.

However, I would not disregard that technology is always advancing and every approach and job is evolving. Since technology is at its pinnacle, it has made all labour far simpler than in the past. Additionally, individuals are spending less on conventional skills and more on technology. Thus, over a period of time, no one may be able to block old practices and abilities.

To conclude, despite the advancement of technology, it is more vital to retain our traditional abilities, since this preserves the roots connected to their origin.

When a country develops its technology - Band 7.5 IELTS model essay

Nowadays, traditional skills and ways are almost getting lost. Some people think that if a country develops its technology, then traditional abilities and methods will be lost, and there is no point in keeping those alive. However, I partially agree with this opinion, and my preference will be addressed further.

To begin with, technology perpetually distances us from culture and tradition. As technology advances, individuals devote less attention to cultural pursuits and remain perpetually preoccupied with contemporary life. For instance, according to a report, the majority of youngsters are unaware of their traditional attire since they wore only western clothing. Therefore, we must safeguard the traditions against technology in order to preserve them.

Additionally, traditional skills and practices are crucial to our nations because they reflect them and carry unique significance. If a country promotes its culture, it will entice individuals from other nations to learn more about it; as a consequence, it will aid in connecting and socialising with those of diverse cultures. Thus, traditional skills and practises not only serve to symbolise the nation, but also to unite its people.

However, technology is also highly useful since it provides immediate response and alleviation in the battle against any sickness, while older methods need time to produce results. As medical technology has advanced, individuals have begun to favour it above traditional practices. Therefore, technology is necessary for quick outcomes.

To conclude, although technology benefits us by giving instant results, traditional skills and methods are more essential to know our culture better, and to connect people to each others' traditions.

When a country develops its technology - Band 7 IELTS model essay

Nowadays, technology and cultural traditions are perennially controversial issues of conversation. Some individuals believe that old methods and abilities are vanishing owing to technological innovation. Moreover, protecting them is futile. I mostly agree with the viewpoint, and my preferences will be explained further.

To begin with, technology is at its pinnacle in every industry today. As a result of the advancement of technology, individuals choose to use it over conventional talents. Moreover, technology greatly simplifies all jobs. For instance, there are lots of sewing machines that have been developed; while, in earlier times, people were using hands to sew, which was time consuming and tough work. Thus, technology makes each task simpler and quicker.

In addition, technology has improved to the point that individuals may now post their professional profiles on internet platforms and get better employment. Additionally, it might enable them to share their work and network with other experts. Individuals may obtain

pleasure and tranquilly as well as prosperity if they share their strengths and skills. Therefore, technology offers several advantages over conventional methods.

However, I would not avoid the fact that traditional talents are very distinctive and useful, since they aid in identifying communities and history, therefore connecting the origins of civilizations. In addition, if individuals lose the identity of their communities, they will lose their own. Therefore, it is essential to preserve old practices and abilities.

In conclusion, despite the fact that traditional skills and traditions assist to define a community, technology is more vital since it makes labour simpler and more useful.

When a country develops its technology - Band 6.5 IELTS model essay

Nowadays, the importance of traditions is getting lost. Some individuals think that if a country develops its technology, then they lose their cultural methods and skills; consequently, there is no need to keep them alive. I disagree with this approach to a major extent, and it will be discussed in further paragraphs.

To begin with, traditional ways and skills have impactful impacts in the long-term. Although technology works fast and gives instant results, traditional ways are always best as they work slowly but effectively. For example, according to a survey, Ayurvedic medicine always works slow but gives appropriate results in the long term and solves the problem from the root compared to technology. So, cultural skills and methods always work better.

Furthermore, traditional skills are a way of earning and an opportunity to create products that represent their culture. Since handcrafting takes place in peoples' hearts, technology is unable to replace it. For instance, handmade work on saree always stands different from the printed sarees. Hence, technology makes work easy; however, handmade products are sustainable and beautiful as well.

However, technology can give opportunities to others to work and provide them jobs; whereas, traditional skills take patience to establish and grow their business. Since technology has increased, the majority of individuals are turning towards it. Therefore, to get employment, technology plays a vital role.

To conclude, traditional methods are indeed to save. Although technology provides employment to people, it is more beneficial as it represents the culture, and gives better treatment in the medical sector as well.
